

ScienceQtech Employee Performance Mapping

Objective:

The objective of this project is to analyze employee performance, project assignments, salary structure, and organizational hierarchy using SQL. The project helps the HR department evaluate employee performance ratings, identify salary distributions, calculate bonuses, verify role assignments based on experience, and analyze project participation.

Dataset Used:

1. emp_record_table
2. proj_table
3. data_science_team

Tasks Performed:

- Created database and tables.
- Imported datasets into MySQL.
- Performed data validation and cleaning.
- Retrieved employee information based on department and ratings.
- Analyzed project assignments and employee participation.
- Identified managers and reporting employees.
- Calculated employee bonuses based on salary and ratings.
- Used aggregate functions, joins, subqueries, views, stored procedures, and window functions.
- Generated reports for HR decision-making.

Conclusion:

The project successfully analyzed employee performance and project allocation. SQL queries were used to extract meaningful insights regarding employee ratings, salaries, reporting structure, and project status. The results can assist the HR department in performance evaluation and workforce planning.
